31. Encourage Use Of Hydroxychloroquine

Hydroxychloroquine is an anti-malarial drug that also could be used against COVID-19, but it has not been tested yet to show that it is effective or safe. Should government officials encourage the use of hydroxychloroquine for use by COVID-19 patients before it is tested in clinical trials?

Yahoo! News Coronavirus

Sample 1,566 U.S. Adults
Conducted April 6-7, 2020
Margin of Error $\pm 3.4\%$

Polling Methodology and Margin of Error Calculation

The Yahoo! News survey was conducted by YouGov using a nationally representative sample of 1,566 U.S. adult residents interviewed online between April 6-7, 2020.

This sample was weighted according to gender, age, race, and education based on the American Community Survey, conducted by the U.S. Bureau of the Census, as well as 2016 Presidential vote, registration status, and news interest. Respondents were selected from YouGov's opt-in panel to be representative of all U.S residents. The weights range from 0.1 to 5.1, with a mean of 1 and a standard deviation of 0.9.

The *margin of error* (a 95% confidence interval) for a sample percentage p based upon the entire sample is approximately 3.4%. It is calculated using the formula

$$\hat{p} \pm 100 \times \sqrt{\frac{1 + CV^2}{n}}$$

where CV is the coefficient of variation of the sample weights and n is the sample size used to compute the proportion. This is a measure of sampling error (the average of all estimates obtained using the same sample selection and weighting procedures repeatedly). The sample estimate should differ from its expected value by less than margin of error in 95 percent of all samples. It does not reflect non-sampling errors, including potential selection bias in panel participation or in response to a particular survey.
