GSP_Q1. In 2010, the (HOME COUNTRY'S) government committed to providing financial and technological support to poorer, developing countries to enable them to more easily reduce their use of coal, oil and other high polluting sources of energy - and to help them invest in cleaner sources of energy such as renewables. This was part of the government's plans to tackle global warming and climate change. To what extent do you support or oppose the government providing poorer, developing nations with this financial and technological support?
