The Liberal Patriot National Tracker Crosstabs

Online sample of 3,012 voters fielded from June 20 to June 29, 2023.

Margin of error: +/-1.9%.

This survey is based on 3,012 interviews conducted by YouGov Blue on the internet of registered voters. The sample was weighted according to gender, age, race/ethnicity, education, and US Census region based on voter registration lists, the U.S. Census American Community Survey, and the U.S. Census Current Population Survey, as well as 2020 Presidential vote. Respondents were selected from YouGov to be representative of registered voters. The weights range from 0.34 to 2.7 with a mean of 1 and a standard deviation of 0.37.

The margin of error (a 95% confidence interval) for a sample percentage p based upon the subsetting sample is approximately 1.9%. It is calculated using the formula:

$$\hat{p} \pm 100 \times \sqrt{\frac{1 + CV^2}{n}}$$

where CV is the coefficient of variation of the sample weights and n is the sample size used to compute the proportion. This is a measure of sampling error (the average of all estimates obtained using the same sample selection and weighting procedures repeatedly). The sample estimate should differ from its expected value by less than margin of error in 95 percent of all samples. It does not reflect non-sampling errors, including potential selection bias in panel participation or in response to a particular survey.
